***Claim Rejections - 35 USC § 102***

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-5,8-20,23-25 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent 6,425,131 issued to Crandall et al.(Crandall).

As per claims 1, 11, Crandall teaches method for synchronous media playback, comprising the steps of:

(a) transmitting a media playback invite request received from a first terminal to a second terminal, wherein the first terminal is associated with a host user and the second terminal is associated with guest user(Abtract, Figs.1-3, col.2, lines 25-36);

(b) relaying a media playback accept response from the second terminal to the first terminal(col.4, lines 25-28); and (c) distributing a start playback request from the

first terminal to the second terminal, wherein the start playback request directs the second terminal to begin a playback session of a media file in synchronization with the first terminal(col.3, lines 18-29).

As per claim 2,12, further comprising the step of:

(d) distributing an action request between the first terminal and the second terminal during the playback session(Abstract, Figs.1-3, col.3, lines 18-27).

As per claim 3, the method of claim 2, further comprising the step of: verifying permissions associated with the first terminal or the second terminal before executing step (d)(col.4, lines 25-29).

As per claim 4, the method of claim 2, wherein the action request is selected from the group consisting of a rewind request, a pause playback request, a fast forward request, a textual comment request, and a user-specified internal effect algorithm to modify audio or video of the media file(Abstract, Figs.1-3, col.1, lines 5-10, col.2, lines 24-36, col.5, lines 10-22).

As per claim 5,13, further comprising the step of:

(d) distributing a stop playback request from the first terminal to the second terminal in response to the host user terminating the playback session(col.5, lines 11-25).

As per claim 8, the method of claim 1, further comprising the steps of

(d) receiving a stop playback request from the second terminal in response to the guest user withdrawing from the playback session(col.3, lines 18-28); and

(e) removing a session entry that is associated with the second terminal, wherein the session entry indicates participation of the second terminal in the playback session(col.3, lines 18-28, col.5, lines 11-31).

As per claim 9, the method of claim 1, further comprising the steps of

(d) receiving a stop playback request from the first terminal in response to the host user ending the playback session(Abstract, Figs.1-3, col.2, lines 47-58); and

(e) terminating the playback session in response to step (d)(Abstract, Figs.1-3, col.2, lines 47-58).

As per claim 10, method of claim 1, further comprising the steps of

(d) instructing the second terminal to modify the media file in accordance with a modification file during the playback session(Abstract, Figs.1-3, col.2, lines 47-58).

As per claim 14,23 a method for synchronous media playback and messaging for a host user, the method comprising the steps of

(a) sending a media playback invite request to an other terminal in response to a host user initiating an invitation to a guest user, wherein the guest user is associated with the other terminal(Abstract, col.2, lines 20-58);

(b) receiving a media playback accept response from the other terminal in response to step (a)(col.2, lines 20-58); and

(c) sending a start playback request to the other terminal in response to step (b), wherein the start playback request begins a playback session of a media file(col.2, lines 20-58,col.3, lines 18-28).

As per claim 15,24, further comprising the step of:

(d) sending an action request to the other terminal, in response to the host user initiating the request(Abstract, col.5, lines 10-20).

As per claim 16,25, the method of claim 14, further comprising the step of:

(d) receiving an action request from the other terminal, in response to the guest user initiating the request(Abstract, col.5, lines 10-22).

As per claim 17, the method of claim 15 or claim 16, wherein the action request is selected from the group consisting of a rewind request, a pause playback request, a fast forward request, a textual comment, and a request for a user-specified internal effect algorithm to modify audio or video of the media file(Abstract, Figs.1-3, col.1, lines 5-10, col.2, lines 24-36, col.5, lines 10-22).

As per claim 18, the method of claim 14, further comprising the step of:

(d) sending a stop playback request to the other terminal in response to the host user terminating the playback session(Abstract, Figs.1-3, col.1, lines 5-10, col.2, lines 24-36, col.5, lines 10-22).

As per claim 19, the method according to any of the claims 14, 15, 16 or 18, wherein the requests are processed through a server(Figs.1-3).

As per claim 20, the method of claim 14, wherein steps (a), (b), and (c) utilize a wireless communications channel(Figs.1-3).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2151

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 6,7 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 6,425,131 issued to Crandall et al.(Crandall) in view of US Publication 2002/0095612 issued to Furhrer et al.(Furhrer).

Crandall teaches all the limitations of claim 1, however does not explicitly teach as per claim 6, and 7, the use of internal time in a device which is derived from a global time to synchronize communication link.

Furhrer teaches the use of internal time in a device which is derived from a global time to synchronize communication link(Abstract, paragraph 26).

Therefore it would have been obvious to one ordinary skill in the art at the time of the invention to modify the teachings of Crandall to use the internal time in a device which is derived from a global time to synchronize communication between two devices as taught by Furhrer in order to make sure that two devices have synchronized communication.

One ordinary skill in the art at the time of the invention would have been motivated to combine the teachings of Crandall and Furhrer in order to provide a system where data transmission from one device to another are synchronized.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
